Summary

Frontend Engineer with 3+ years building production React and Next.js applications across AI, SaaS, and enterprise platforms. Engineered 80%+ of features for a React 19 + Vite SPA powering an AI chat-agent configuration platform. Consistent track record of improving performance by 30–60%, delivering bilingual RTL interfaces, and integrating complex API-driven workflows at scale.

Experience

Lucidya

Jan 2026 – Present

Frontend Engineer (Full-time, Remote)

Jeddah, Saudi Arabia

- Engineered 65%+ of frontend features for a React 19 + Vite SPA powering an AI chat-agent configuration platform, delivering agent identity, guardrails, knowledge sources, webhooks, human handoff flows, and audit logs end-to-end.
- Built a token-based design system of 23+ reusable MUI components (DataTable, DateRangePicker, multi-select, etc.) consumed across all 23 feature pages, enforcing consistent theming and cutting per-feature UI build time.
- Delivered full bilingual support (English/Arabic) with RTL layout switching, directional icon mirroring, and CLDR-compliant plural rules, making the product fully accessible to Arabic-speaking markets.
- Implemented route-level code splitting, lazy loading with chunk-retry fallbacks, and image optimization, reducing total asset size by 60% and eliminating post-deploy stale-chunk errors for end users.
- Standardized form architecture across 15+ complex flows using React Hook Form and Zod, unifying validation, error handling, and API submission patterns platform-wide.
- Wrote Vitest and React Testing Library tests for shared components and critical form flows; delivered all features in agile sprints via pull requests, code reviews, and Bitbucket Pipelines CI on a cross-functional squad.

Dussur

Jun 2023 – Dec 2025

Mid-Level Frontend Developer (Full-time, Remote)

Riyadh, Saudi Arabia

- Architected and launched the company’s marketing landing page from scratch using Next.js and Tailwind CSS, achieving 95+ Lighthouse performance scores with full responsiveness across mobile, tablet, and desktop.
- Engineered role-based authentication and access control flows for three distinct user groups (customers, admins, freelancers), streamlining CRUD operations and eliminating cross-role permission gaps.
- Reduced initial load time by 30–35% and eliminated the majority of unnecessary re-renders on high-traffic pages by introducing code splitting, lazy loading, and targeted memoization strategies in React.

Huawei

Jun 2022 – Feb 2024

Junior Frontend Developer

Giza, Egypt

- Delivered production React features as part of a 5-person frontend team on Etisalat’s NOC Knowledgebase and Topology Viewer — internal tools used daily by network operations and support teams.
- Built search, filtering, and user guide modules for the NOC Knowledgebase, improving discoverability of operational documentation and reducing time-to-resolution for support engineers.
- Contributed map-based visualizations, path tracing, and connection detail views to an interactive network topology viewer, enabling operations teams to inspect live site relationships in-browser.
- Partnered with product and QA teams to define acceptance criteria and author user acceptance test cases, contributing to a 10–15% reduction in post-release UI defects across major releases.

Technical Skills

Languages: JavaScript (ES2022+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React 19, Next.js 14, Redux Toolkit, TanStack Query (React Query v5), React Hook Form, Zod, Tailwind CSS, Material UI (MUI v7), Bootstrap, Framer Motion, Leaflet, NextAuth.js

Build & Tooling: Vite, Webpack, ESLint, Prettier, Vitest, React Testing Library, Git, Bitbucket, GitHub

APIs & Practices: RESTful APIs, WebSockets, JWT authentication, i18next (RTL/LTR), Agile/Scrum, Code Review, CI/CD (Bitbucket Pipelines)

Education

Modern Academy

Bachelor of Science in Computer Science

Maadi, Cairo

Projects

D-Wash Customer Portal | *React 18, TypeScript, Vite, Tailwind CSS, i18next*

[Live Link](#)

Bilingual (Arabic/English) car wash platform with customer, admin, and provider portals — covering booking flows, secure payments, discount codes, real-time chat, and Google Maps location selection; optimized with lazy loading and code splitting.

The Wild Oasis | *Next.js 14, Supabase, NextAuth.js, Tailwind CSS, Server Actions*

[Live Link](#)

Full-stack luxury cabin booking platform with real-time availability, OAuth authentication, and optimistic UI updates via Next.js 14 server actions and Supabase.

Parking Reservation System | *React 18, TypeScript, Tailwind CSS, Zustand, React Query*

[GitHub](#)

Production-ready parking reservation frontend with gate, employee, and admin interfaces, real-time zone availability via WebSockets, and type-safe form flows using React Hook Form and Zod.

Portfolio | *React, Vite, TypeScript, Framer Motion*

[Live Link](#)

Personal portfolio with animated project showcases and smooth page transitions using Framer Motion, fully responsive across all device sizes.
